

## Home Technology Now Beautifully Translated

# the RSI Group

By Commercial Electronics Ltd

### The process:

#### 1 Initial Design & System Specification.

We start with a client discovery meeting involving architect, designer or builder as required. A Design Services Agreement to provide the necessary research, development and design proposal documentation is prepared. All documentation is based on AutoCAD architectural drawings detailing the furniture layouts, distinctive architectural features and pertinent locations for local and central equipment. Once this design phase is accepted, a contract is presented and a project manager assigned.

#### 2 Project & Business Management.

RSI Professional Project Management ensures that all projects, large or small, are tracked and supervised by our experienced team ensuring a successful completion of the project.

#### 3 Engineering, Wiring and Rough-In.

Our Engineering team details the final plans into workable drawings for the next phases of the project. Our crews will wire the home for low-voltage systems, completing the "rough-in stage" (such as terminating the cabling, installing cover plates and finish hardware), and build equipment cabinets and racks. Thorough testing of the system prior to delivery or installation is undertaken by our engineers.

#### 4 Programming and Substantial Completion.

A design review with our project manager and design engineer examines the all important "user controls" with the home owner before finalizing the programming requirements. As a final check all systems are thoroughly tested and commissioned in preparation for their use by the homeowners.

#### 5 Ongoing Support.

Our customer support staff takes over. As technology changes, we continue to provide homeowners with ongoing pre-emptive support and service. Commercial Electronics Ltd was founded on being a customer service organization in 1957.

### Services RSI can provide:

- Dedicated Home Cinema Rooms
- Whole-Home Lighting & Window Treatment Control
- Distributed, House-Wide Music Systems
- Climate Control (HVAC) Overlay
- Distributed, House-Wide Video Systems
- Integrated Phone and Intercom Systems
- Centralized Movie & Music Server Storage
- Structured CBus Network Wiring
- Whole-Home Touch Pad Control Systems
- Controlled Motorized Systems, Lifts, & Features
- Surveillance Control and Recording Systems
- Security Control Overlay Systems & Remote Access

Working with a single, full-service firm is the best way to guarantee that the final product achieves the original design intent
